

Installing PLMS 3

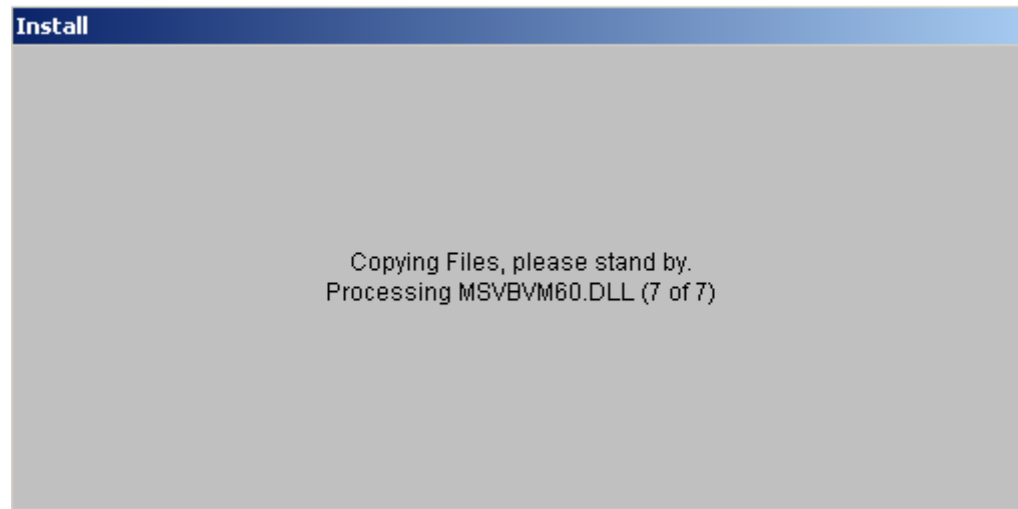

Instructions

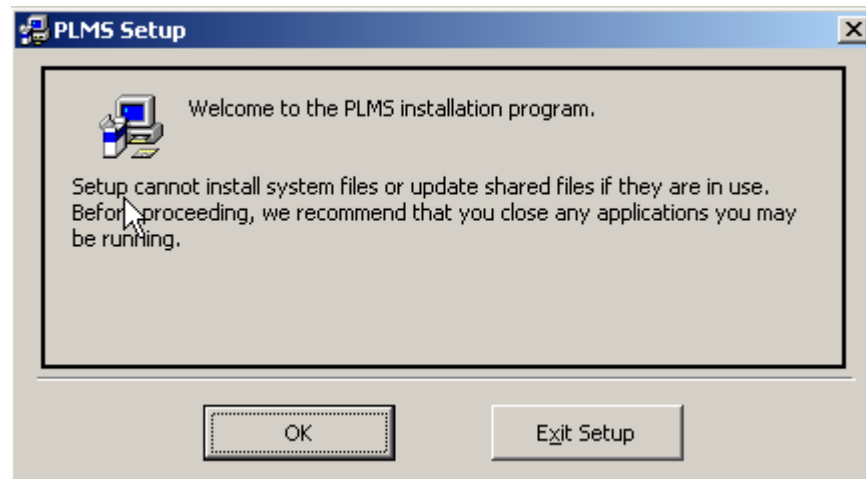

After you have copied the 3 files to the target computer,
double-click on the file setup.exe

As the install program runs, it will first check your computer to see what new files need to be installed and if any existing files need to be updated. If you receive any conflicting file messages, just click Ignore.

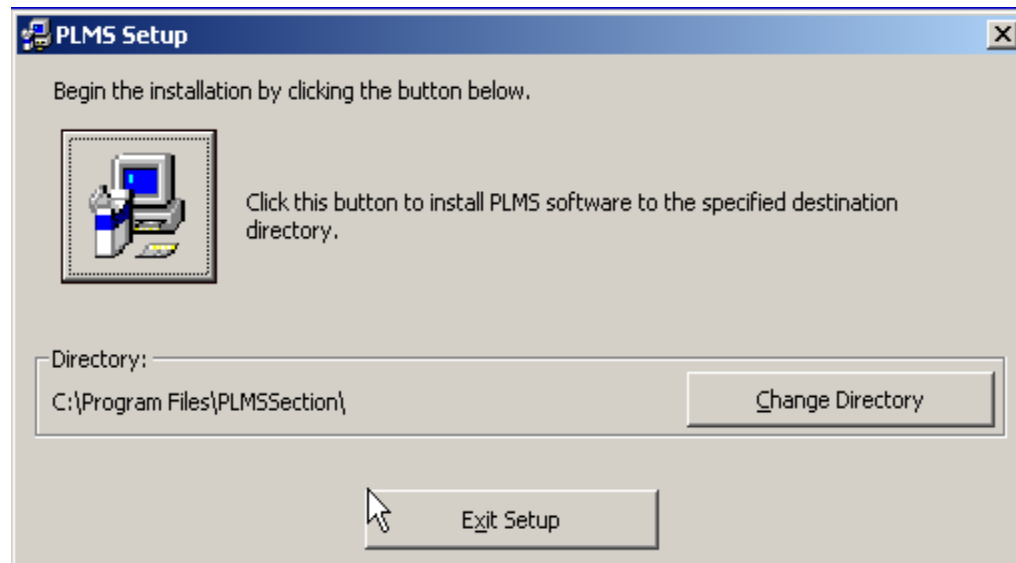

Once all the files have been checked the install is ready to begin, you should shut down any other programs running to avoid conflicts. Then click OK to continue.

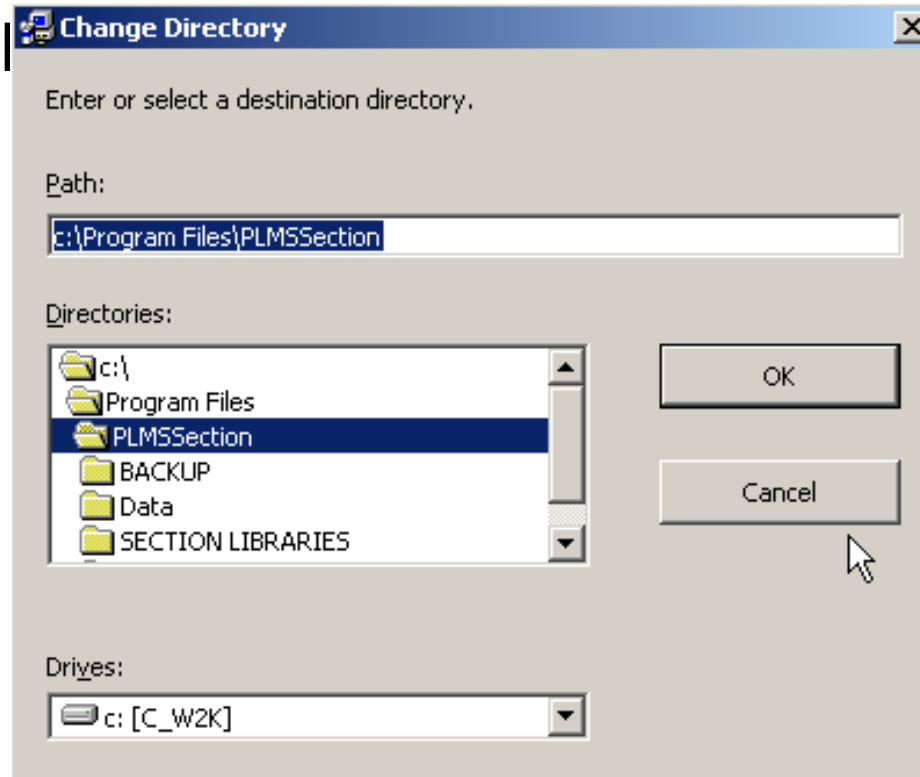

Before actually installing PLMS you must decide where on your computer you want to install it. By default it will create a folder and install at C:\Program Files\PLMSSection\

To install at the default location click the icon that looks like a PC, else click the Change Directory button.

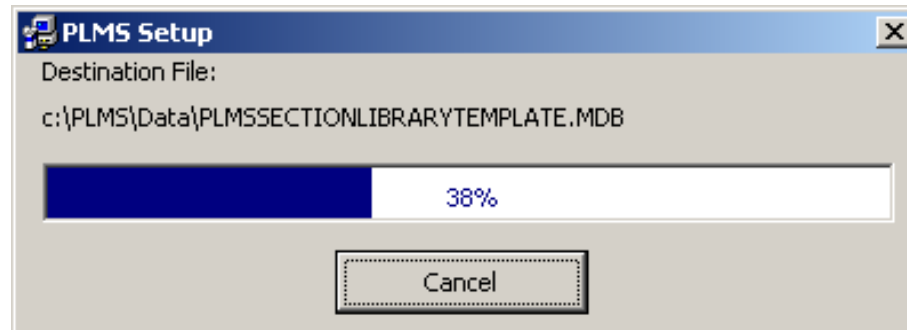

If you choose to install PLMS at other than the default location, first select the drive, then the directory. The new location will be displayed in Path:

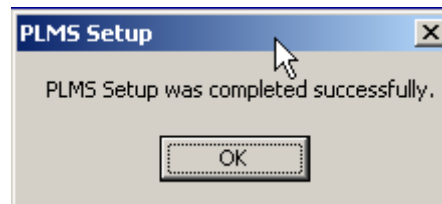

Click OK to

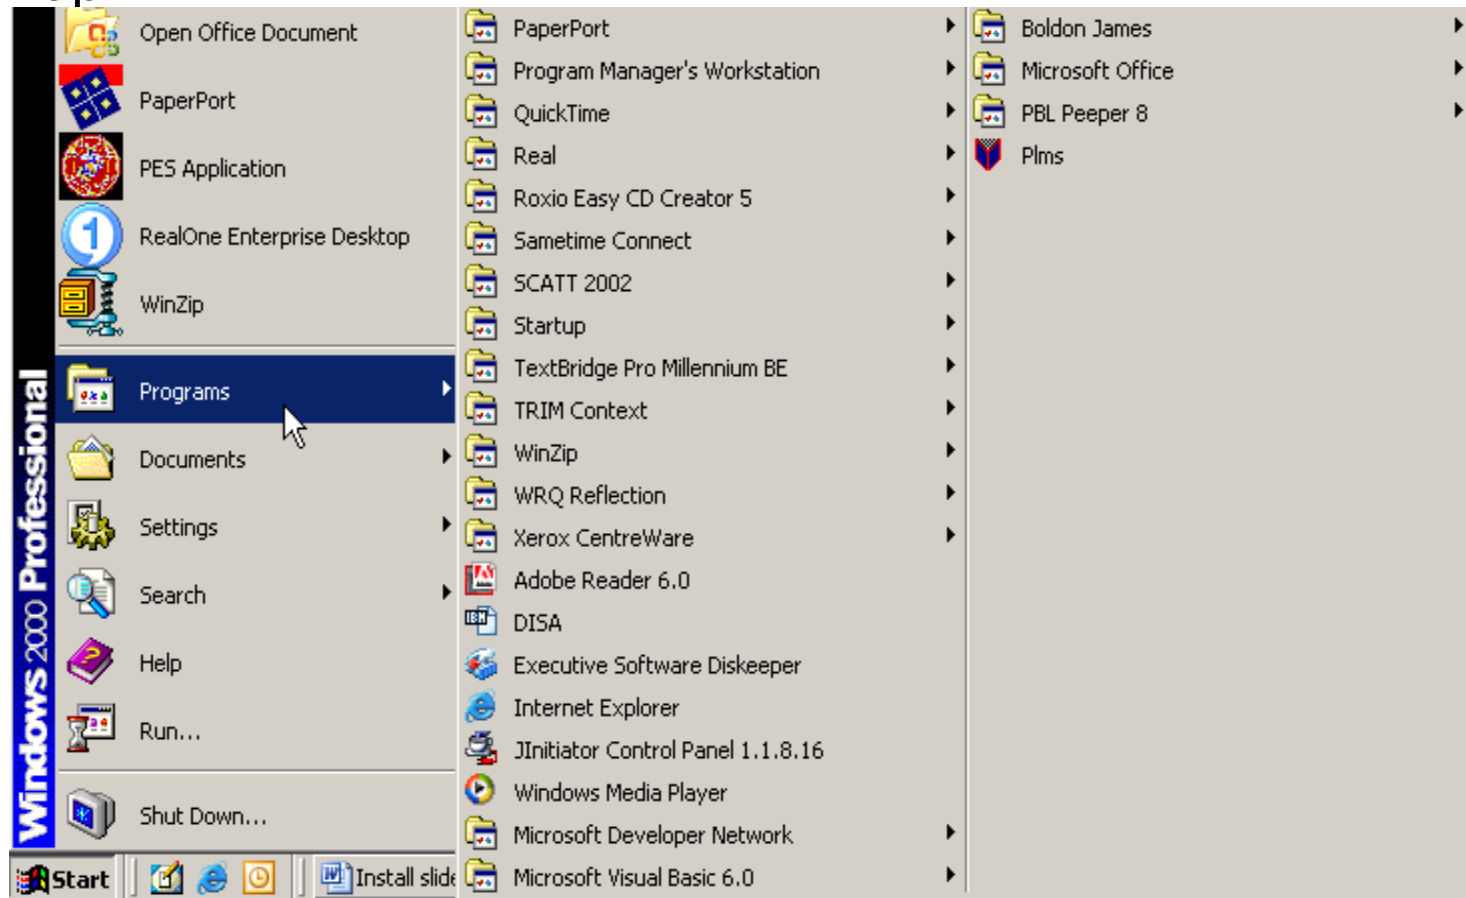

As the program is installing, a progress bar will be displayed.

You will be notified when the installation has completed. Click Ok.

Now that PLMS is installed to start the program click the Start button in the lower left corner. Next click on Programs. Finally click on the PLMS icon. You can also create a shortcut on your Desktop.

The 3 PLMS Install files originally downloaded can now be deleted.
